

Discussion: The future of European Services for Official Statistics

David Schiller (IAB) and Christof Wolf (GESIS)

European Data Access Forum, Luxembourg, 24-25 March, 2015

Discussion: The future of European Services for Official Statistics

- A crucial element for the future is the development and implementation of standards to ease preparation, reuse, and exchange of metadata.
- How do we move from the current fragmented situation to more integrated and standardized European Services?

Discussion: The future of European Services for Official Statistics

- There are different approaches for the implementation of a EuRAN.
- From data owner/provider view what is the more promising approach?
- Building a completely separated RAN or concentrate on secure and standardized interfaces (is a mixture possible)?

Discussion: The future of European Services for Official Statistics

- What are the biggest obstacles when working with microdata form official statistics in Europe?
- What are the most curial services missing?
